

Fursuit Cleaning Guide

1. Washing Methods

Item	Washing Machine	Manual Wash Only
Head		√
Bodysuit	√	
Body Padding	√	
Hand Paws	√	
Feet Paws		√
Tail	√	

Avoid bleach on colored areas. Do not iron any part of the suit.

2. Machine Washing Instructions

Preparation

Insert padding and stuffing into the bodysuit and tail before washing to help maintain shape.

Washing

Place the washable parts into a laundry bag. Fabric softener and disinfectant may be added. Do not use hot water. Keep water temperature below 40°C (104°F).

Drying

Hang dry with the fur facing downward. If using a dryer, the temperature must not exceed 40°C (104°F). Low-temperature drying at 30–35°C (86–95°F) is recommended.

3. Manual Washing Instructions

Preparation

Remove all non-waterproof components from the head, including eye modules, internal fans, and any electronic parts.

Detergent Solution Mixing

Liquid detergent: Add 10–20 ml per liter of water, or 0.3–0.6 fl oz per quart of water.

Powder detergent: Add 6–12 g per liter of water, or 0.2–0.4 oz per quart of water.

Cleaning

Pour the prepared solution onto the part to be washed. Gently scrub using a soft-bristle brush.

Rinsing

Rinse thoroughly with clean water until all foam is completely removed.

Drying

Air-dry naturally. Do not use a dryer. If natural drying is difficult, use a hair dryer on low-temperature mode.

4. Do Not

- Do not use bleach.
- Do not use high temperatures in any cleaning method.
- Do not tumble dry parts that are for manual washing only.
- Do not iron.
